MISSOURI
REGION: MIDWEST

LOCALLY RELEVANT RESEARCH

With rich plant and wildlife, and a high urban population, Missouri faces loss of biodiversity and extreme weather conditions.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of the University of Missouri, chosen because of its research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
