	Biodiversity

## LOCALLY RELEVANT RESEARCH

With its wildlife and preserved land, and a high rural population, Montana faces loss of its flora and fauna.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of Montana State University and the University of Montana, chosen because of their research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
