VIRGINIA
REGION: SOUTHEAST

LOCALLY RELEVANT RESEARCH

With biodiversity and a coastline, and a high rural population, Virginia faces increased damage from storms and loss of wildlife.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of the University of Virginia and the Virginia Polytechnic Institute and State University, chosen because of their research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
