WASHINGTON
REGION: NORTHWEST

LOCALLY RELEVANT RESEARCH

With an expansive wilderness and water resources, and a high urban population, Washington faces water and air pollution.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of Washington State University and the University of Washington, chosen because of their research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
