LOCALLY RELEVANT RESEARCH

With its mountainous terrain and a high rural population, West Virginia faces erosion and water pollution as well as environmental degradation from mining coal.

To understand how research at public institutions can help policy-makers respond to those issues, NCSE examined what climate-related work came out of Marshall and West Virginia University, chosen because of their research classification, enrollment size, and/or land grant status over the last 5 years (2014-2018).
